

SolCrys AEO MCP

Connect Claude or ChatGPT to your SolCrys organization, ask about your AEO data in your own words, and keep your Corporate Context accurate with your assistant's help.

Work in a simple rhythm

Connect once Add SolCrys to Claude or ChatGPT and choose what your assistant may read and change.	Ask any day Ask about visibility, citations, answer accuracy and tasks, and turn the answers into work.	Review every week Check what assistants changed in Corporate Context, then keep or undo each change.
Why review weekly? Corporate Context is the source of truth SolCrys grounds its work in. An assistant's edits go live at once, so a short weekly review keeps that truth accurate.		

Follow the flow

1 Get ready	2 Connect Claude	3 Connect ChatGPT	4 Ask about your data	5 Read your context	6 Update pages	7 Review the changes
----------------	---------------------	----------------------	--------------------------	------------------------	-------------------	-------------------------

Step	Page	What you do
1	2–3	Check your plan and role, then copy the connection URL from MCP .
2	4–5	Add SolCrys to Claude , approve access, and use it in Cowork and chats.
3	6	Add SolCrys to ChatGPT and approve access.
4	7	Ask your assistant about visibility, citations, answer accuracy and tasks.
5	8–9	Read your Corporate Context and check it against what AI answers get wrong.
6	10	Have your assistant update pages, as live edits or as drafts for review.
7	11–12	Review each change in SolCrys: keep it, revert it, or restore an earlier version.
	13	Quick reference and troubleshooting.

Before you start: MCP is included on the Starter, Pro and Custom plans, and you need to be an editor or admin of your SolCrys organization. To add workspaces and prompts, see the **Workspace Setup** guide.

Screenshots use the SolCrys interface with fictional brands, people and results. Claude and ChatGPT change their menus often: their steps were checked in October 2026, and labels can differ by plan. The controls you see depend on your role, plan and workspace type. October 2026.

Check your plan and role

SolCrys MCP lets an AI assistant work with your SolCrys data through the Model Context Protocol (MCP), an open standard that Claude, ChatGPT and other assistants support. Your assistant calls SolCrys tools to read your data and, when you allow it, to update Corporate Context.

What your assistant can do

Area	Your assistant can	Permission
Workspaces	List your workspaces and their activity counts.	read:workspace
Visibility and prompts	Read headline visibility, share of voice, results per engine, and presence and trends for each prompt.	read:prompts read:responses
Citations	Read which pages and domains AI answers cite, and which of them mention you.	read:citations
Deep Analysis and Actions Hub	Read Deep Analysis reports and Actions Hub tasks, and mark a task as published with its URL.	read:deep-analysis read:actions · write:actions
Content audits and Answer Accuracy	Read audit reports, and the pass or fail verdict for each AI answer with the claims it got wrong.	read:content-audits read:answer-accuracy
Corporate Context	Read pages and grounding, create drafts for review, and create, edit or remove pages live.	read:corporate-context write:corporate-context write:corporate-context-live

What your role allows

Role	Can connect	What the connection reaches
Admin	Yes	Everything above. Admins see every connection in the organization and can revoke any of them.
Editor	Yes	Corporate Context and the workspace list only. Reading AEO data such as prompts and citations needs an admin's connection. Editors see and revoke their own connections.
Viewer	No	Ask an organization admin for editor access.

Monthly MCP calls

Plan	Calls per month
Free	Not included
Starter	500
Pro	2,500
Custom	Unlimited

Each tool your assistant calls counts once, and a broad question can use several calls. The count is shared by everyone in the organization and resets on the first day of each month (UTC).

Each connection can make up to 60 calls a minute.

Each person connects their own assistant. Everything a connection changes is recorded under the name of the person who approved it, with the app it came through, for example **Maya Chen via Claude**.

Copy your connection URL

Revoke

MCP → Connected Apps shows the URL to share and every assistant connected to your organization.

- 1. Open your account menu at the bottom left of SolCrys and select **MCP**.
- 2. On **Connected Apps**, select **Copy URL**. The address is `https://mcp.solcrys.com/mcp`, and everyone in your organization uses the same one.
- 3. After you approve an assistant (steps 2 and 3), it appears in this list within about a minute.

Row part	What it tells you
Name	The name the app gave itself, such as Claude or ChatGPT .
Permissions	What the connection may do. A connection with all nine read permissions and no write permission shows All read scopes .
Last used, Granted by	When the assistant last called SolCrys, how many active sign-ins it has, and who approved it.
View activity	Every Corporate Context change made through this connection (step 7).
Revoke	Disconnects the app within about 60 seconds. To use SolCrys again, connect the assistant again.

Personal Access Tokens is for tools that can't sign in through a browser, such as scripts. Claude and ChatGPT use the consent screen, so most people never need a token.

SolCrys | SolCrys AEO MCP

3 / 13

Add SolCrys to Claude

Authorize Claude

The app chose this name itself. After you decide, you return to claude.ai.

It is asking to connect to one of your SolCrys organizations. Choose what it can do.

Authorize for

Northstar Analytics

Read access

- ☒ Read workspace metadata and activity counts.
read:workspace
- ☒ Read your tracked prompts and their analysis.
read:prompts
- ☒ Read AI responses captured for your prompts.
read:responses

6 more read permissions

Write access

Writes you can grant start on. Claude can only change what you allow here.

- ☒ Mark a task as published, with the URL it was published at.
write:actions
- ☒ Create Corporate Context drafts for review; cannot publish or activate them.
write:corporate-context
- ☒ Create, edit, and remove Corporate Context pages without a review step. Changes reach AI grounding at once, are recorded under your name and this app, and can be reverted in the Corporate Context center.
write:corporate-context-live

Authorize

Deny

Signed in as maya@northstar.test. Disconnect at any time from MCP → Connected Apps in your account menu.

The SolCrys consent screen. Writes you can grant start on.

Add the connector

Claude Pro or Max, on the web or in the desktop app:

1. Open **Customize → Connectors** (on older versions, **Settings → Connectors**).
2. Select **+ Add → Add custom connector**. Name it **SolCrys** and paste the URL from step 1.
3. If Claude asks how to sign in, keep **Sign in now** and choose **Register automatically**. Leave Client ID and Secret blank. Select **Add**.
4. Select **Connect**. The SolCrys consent screen opens; the desktop app opens it in your browser. Sign in to SolCrys if asked.

Claude Team or Enterprise: an owner first adds SolCrys under **Organization settings → Connectors**. Each member then finds it under **Customize → Connectors**, marked **Custom**, and selects **Connect**.

Approve access

5. Under **Authorize for**, choose your SolCrys organization.
6. Review **Read access** and **Write access**. Untick anything Claude shouldn't do.
7. Select **Authorize**. You return to Claude, and SolCrys shows as **Connected**.

Live edits are the last write permission: *Create, edit, and remove Corporate Context pages without a review step.* Leave it on to let Claude maintain pages for you; each change is recorded and can be reverted (step 7). Untick it if you only want drafts.

Use SolCrys in Cowork and chats

Turn SolCrys on

1. In a chat or a Cowork task, select + → **Connectors** and turn on **SolCrys**. Cowork uses the connectors on your Claude account and loads them when a task starts.
2. Ask *"Use SolCrys to list my workspaces."* If Claude lists them, you're connected.

Decide what needs your approval

Claude asks before it uses a tool: **Allow once** or **Always allow**. To set this ahead of time, open **Customize → Connectors → SolCrys → Tool permissions** and choose **Always allow**, **Needs approval** or **Blocked** for each tool.

Tool	What it does	Suggested
solcrys_get_..., solcrys_list_...	Read your data.	Always allow
solcrys_propose_cc_page	Creates a Corporate Context draft. Nothing changes until an editor publishes it.	Always allow
solcrys_write_cc_page	Creates, edits or removes a live Corporate Context page.	Needs approval
solcrys_publish_task	Marks an Actions Hub task as published, with its URL.	Needs approval

Working in Cowork

Cowork can run longer tasks, such as checking every page against your website: *"Use SolCrys. Check every live Corporate Context page for Northstar Analytics against https://www.northstar.example/ and its product pages. Make a table of page, outdated or missing line, evidence and fix, then save the fixes as drafts for review."*

Keep Cowork in **Manual** mode, or keep solcrys_write_cc_page on **Needs approval**, so you see each page edit before it goes live. Cowork needs a paid Claude plan; Claude Free allows one custom connector.

Before a Research run: Claude's Research mode can call connector tools without asking. Set solcrys_write_cc_page to **Blocked** or turn SolCrys off for that chat.

Claude Code and Codex

In a terminal, add SolCrys, then sign in on the same consent screen:

Tool	Command
Claude Code	claude mcp add --transport http solcrys https://mcp.solcrys.com/mcp, then /mcp to sign in
Codex	codex mcp add solcrys --url https://mcp.solcrys.com/mcp, then codex mcp login solcrys

Changes from Codex show as **via Codex**.

Add SolCrys to ChatGPT

Authorize ChatGPT

The app chose this name itself. After you decide, you return to chatgpt.com.

It is asking to connect to one of your SolCrys organizations. Choose what it can do.

Authorize for

Northstar Analytics

As an editor of Northstar Analytics, you can connect ChatGPT to Corporate Context and the workspace list only. The rest needs an admin.

Read access

- ☒ Read workspace metadata and activity counts.
read:workspace
- ☐ Read your tracked prompts and their analysis.
read:prompts · Admin only
- ☐ Read AI responses captured for your prompts.
read:responses · Admin only
- ☐ Read citations and source-domain data.
read:citations · Admin only

Leo, an editor, connecting ChatGPT. Permissions only an admin can grant are marked Admin only.

Check your ChatGPT plan

Business, Enterprise and Edu: SolCrys tools including writes, in beta and on the web only. An admin first turns on developer mode for the workspace.

Pro: read tools only, in developer mode. For other plans, check OpenAI's current plan details.

Add the app

ChatGPT is renaming Apps to Plugins, so your account shows one of these:

- 1. Plugins:** go to chatgpt.com/plugins, select + → **Add custom MCP server**, name it **SolCrys**, and paste the URL under **Connection**.
- Apps:** in Settings, turn on **Developer mode** under Apps → Advanced settings, then select **Create**, name it **SolCrys** and paste the URL.
- 2.** Choose **OAuth** for authentication. Confirm the warning about custom servers.
- 3.** The SolCrys consent screen opens. Choose your organization, review the permissions and select **Authorize**.
- 4.** Finish with **Create** (and install the plugin, on the Plugins flow). To share it with your ChatGPT workspace, an admin publishes it under **Workspace settings** → **Apps** → **Drafts**.

Use it in a chat

- 5.** Pick SolCrys with @, the + menu or **Plugins** in the message box. Pick it again on each message where you want it.
- 6.** ChatGPT asks before each write. Choose **Allow once** for Corporate Context edits, so you see each one.

Deep research only reads, and agent mode doesn't use custom apps. When SolCrys adds tools, an admin refreshes the app before ChatGPT can use them.

How ChatGPT changes are labeled: in SolCrys, edits made through ChatGPT read **via an MCP app**, with the connection shown as **ChatGPT · chatgpt.com**.

Ask about your AEO data

Ask in your own words. Your assistant picks the SolCrys tools, reads the data and explains it. Name the workspace and the period when it matters: most SolCrys data covers the last 7, 14, 30 or 60 days.

You want to decide	Ask, for example	Your assistant reads
Where to focus	"Compare our visibility by engine for the last 30 days with the 30 days before. Which engine should we work on first, and why?"	Visibility insights
Which prompts to fix	"Which prompts lost the most presence in the last 30 days? For each, give the likely cause and one fix to try."	Prompt insights, Deep Analysis
Where to earn mentions	"Which domains do AI answers cite most for our prompts? Sort them into ours, competitors' and editorial, and pick three to pitch."	Citations
What to correct	"Group the last 30 days of Answer Accuracy failures by type. Show one example each, and say if Corporate Context or our website needs the fix."	Answer Accuracy
What to do this week	"Using our latest Deep Analysis, pick three open high-priority Actions Hub tasks for this week, and say what each one needs."	Deep Analysis, tasks
Which pages to improve	"Which fixes from the latest content audit would raise its score most? List the page and the exact change for each."	Content audits

EXAMPLE CONVERSATION · ILLUSTRATIVE

YOU

Use SolCrys. For Northstar Analytics, which three prompts need the most work, why, and what should we do next for each?

ASSISTANT

↳ solcrys_get_prompts_insights · solcrys_get_citations_insights

Over the last 14 days, three prompts stand out:

- **Which BI tools are easiest for a small team to adopt?** You're named in 3 of 9 answers, and they lean on a roundup that doesn't list you. **Next:** ask the roundup's editor to review Northstar.
- **Which analytics platforms offer the fastest setup?** 2 of 9 answers, down from 4 in the period before. **Next:** state your setup time on your getting-started page.
- **What reporting tool should a data lead choose?** 5 of 9 answers, but none of them cite your own pages. **Next:** publish a buyer's guide for data leads.

Tips

- With more than one workspace, start with "Use SolCrys to list my workspaces" and then name the one you mean.
- Ask for the period and engine behind each number, and which SolCrys data the answer came from.
- Turn findings into work: "Turn these into three tasks, each with an owner, the page to change and the prompt to watch." Your assistant drafts them; it can't add them to Actions Hub for you.
- Close the loop when the page is live: "Mark the setup guide task as published at <https://www.northstar.example/guides/setup>." This works for Deep Analysis tasks that are approved or in progress.
- If you're an editor, your connection reads Corporate Context only. AEO data needs an admin's connection.

Numbers come from SolCrys measurements of AI answers and the pages they cite. They are not website traffic.

Know your Corporate Context

Corporate Context is your organization's source of truth: the facts, messaging and guidance SolCrys grounds its work in. Answer Accuracy scores AI answers against it, SolCrys features read it, and so do assistants you connect.

Corporate Context

Your organization's source of truth — the facts, messaging, and guidance SolCrys agents ground their work in.

There are 3 page types defined — you can manage them for your organization.

Company facts

Review

Organization — shared v4 Oct 13, 2026

Northstar Embedded facts

Northstar Embedded v2 Oct 5, 2026

Corporate Context, with four assistant changes waiting under Needs review.

1. Select **Corporate Context** in the sidebar, under **All Workspaces**. Editors and admins see it.

2. Read **Needs review** first: it lists changes waiting for a person (step 7).

3. Below it, pages are grouped **By type** or **By scope**. A

Review

 chip marks a page with an unreviewed change.

Page type	What it holds	Grounds Answer Accuracy
Facts	The canonical facts AI engines must get right: company, products, plans, security. One page per scope.	Yes, by default
Messaging Framework	Your positioning and proof points. One page per scope.	Yes, by default
Writing Guidance	Voice, tone and terminology for a channel, such as your blog or LinkedIn. Several pages per scope.	Not by default
Your own types	Types an editor adds with manage them for your organization .	If an editor pins them

Scope: a page is either **Organization — shared**, for every workspace, or belongs to one workspace. For that workspace, a workspace page replaces an organization page of the same type and name.

Check your context with your assistant

What your assistant can read

Ask it to	What comes back
List pages	Each live page, or each draft, with its type, scope, version and last update.
Read a page	The full page, its version and its sources.
Read the grounding	All live pages as one document, the way SolCrys features read them.

Assistants don't see archived pages or which pages wait for review: check **Needs review** in SolCrys.

Find gaps with a prompt recipe

Copy a recipe and change the names and links. Each lists gaps with evidence, proposes exact changes and waits for you. Your assistant reads web pages with its own web tools; if it can't, paste the page text.

When	Copy this prompt
New product launch	"Use SolCrys. Compare https://www.northstar.example/products/embedded with our Facts and Messaging Framework for Northstar Embedded. List missing or outdated names, plans, integrations and proof points with quotes. Propose exact edits and wait for my approval."
Homepage or positioning refresh	"Use SolCrys. Read https://www.northstar.example/ and compare its positioning, proof points and numbers with our organization-wide Messaging Framework and Facts. Quote each difference, then save your proposed wording as drafts for review."
Monthly freshness check	"Use SolCrys. List our Corporate Context pages for Northstar Analytics by last update. In pages older than 90 days, flag lines that date fast, such as counts, plans, prices and certifications. Ask me what changed, then propose edits."
Fix what AI gets wrong Admin connection	"Use SolCrys. Read the Answer Accuracy failures for the last 30 days. Match each wrong or missing claim to the page that should cover it, quote the answer, and propose the exact line. Flag any fix that belongs on our website instead."

Check each proposal against a source you trust before you approve it (step 6). A new product's facts go in the existing Facts page for its scope: Facts and Messaging Framework allow one page per scope.

Look for	The signal
Page is behind	Answers contradict grounding but match your current website. Update the page.
AI is behind	Answers show outdated info your page marks as no longer current. Fix the sources AI reads.
Claims left out	Answers miss a required claim . State it plainly on the page and on your website.
Gaps or duplicates	A page type has no page, or two Writing Guidance pages say the same thing.

EXAMPLE REVIEW · ILLUSTRATIVE

ASSISTANT

↳ solcrys_get_cc_grounding · solcrys_get_answer_accuracy_details

Company facts (v3): says 3,800 customers and SOC 2 Type I. Four answers fail as contradicting it, yet cite 4,200 and SOC 2 Type II from your October company page, so the page is behind.

Suggested fix: update both lines.

Press release guidance (v2): both rules repeat Blog voice. Suggested fix: remove the page.

Answer Accuracy doesn't link a failure to a page. Your assistant matches them by reading both, so check its reasoning.

Update pages with your assistant

Two ways to change a page

	Live edit	Draft for review
Permission	Create, edit, and remove Corporate Context pages without a review step	Create Corporate Context drafts for review
Takes effect	At once. SolCrys uses the new version from its next run.	Only when an editor selects Publish in SolCrys.
Can	Create, update or remove (archive) a page.	Create a new page, or a replacement for a live page.
Shows in SolCrys as	● Live update ● New page by agent ● Removed by agent	Draft update New draft
Limits	A reason (change note) on every edit, and up to 60 live edits per connection per hour.	Can't publish, archive or delete anything.

Ask for a change safely

1. Have your assistant read the page first. It needs the page's current version to edit it.
2. Give the change and its source, and ask to see it before it's written. After a recipe (step 5), reply *"Write the changes I approved as live edits, each with a change note that names the source."* For drafts: *"Save them as drafts for review."*
3. Approve the write when your assistant asks (**Allow once**). The change note becomes the reason you see in History.
4. Ask for the new version number to confirm the change landed.

EXAMPLE CONVERSATION · ILLUSTRATIVE	
YOU	Update Company facts from our company page, https://www.northstar.example/company . Show me each change and the change note before you write anything.
ASSISTANT	↳ web fetch · solcrys_get_cc_page Company facts (v3) says about 3,800 customers in 35 countries, 280 employees and SOC 2 Type I. Your company page says 4,200, 38, 310 and SOC 2 Type II since May 2026. Change note: <i>"From the October 2026 company page: updated customer, country and employee counts, and SOC 2 Type I to Type II (May 2026)."</i> Shall I write it as a live edit?
YOU	Yes.
ASSISTANT	↳ solcrys_write_cc_page · op: update Done. Company facts is now v4. The change is live and waiting for review in SolCrys.

Removing a page archives it. It stops grounding at once, and only a person can bring it back with **Restore page**. Assistants can't publish drafts, mark changes reviewed, revert, or delete a page for good: those stay in SolCrys.

@@ -0,3 +0,3 @@

4 4 ## Company

5 5 - Northstar Analytics makes self-serve BI software for growing software companies.

6 6 - Founded in 2016 in Denver, Colorado.

7 - - About 3,800 customers in 35 countries.

7 + - About 4,200 customers in 38 countries.

8 - - 280 employees.

8 + - 310 employees.

A live update made through Claude, opened on Changes: removed text in red, added text in green.

- 1. Open **Corporate Context**. Under **Needs review**, each row names the page, what happened, and who made the change through which app.
- 2. Select a row. The page opens on **Changes**, comparing the last reviewed version with the current one. Choose **Split** or **Inline**.
- 3. Decide with the buttons on the banner:

Banner	Keep it	Undo it
Agent updated this live page — needs your review	Mark reviewed	Revert to v3 (the last reviewed version)
Agent created this live page — needs your review	Keep page	Remove page
Agent removed this page — needs your review	Accept removal	Restore page
New draft or Draft update	Publish	Archive, or Edit it first

The keep button waits until the changes have loaded, so you always see them first. Revert undoes every assistant edit since the last review, and editing the page yourself also clears the review.

Times are in America/Denver. A purged page leaves no history here.

Activity shows every change across your pages, filtered by person, app, connection and time.

1. On a page, open **History**. Select **View diff** to compare versions, or **Restore** to bring back an earlier one. It becomes a new version, and every version stays.

2. Select **Activity** (or **View all activity**) to see every change in the last 24 hours to 90 days.

3. Select **All changes from this connection** to see everything one assistant did. To stop it, select **Manage connection** and **Revoke** it on MCP.

Changes read "by person via app": via **Claude**, via **Codex**, via an **MCP app** (ChatGPT, other assistants and tokens), via **the dashboard**, via **the SolCrys agent** or via **brand scan**. Reverting fixes future runs; results that already used the earlier text don't change.

SolCrys | SolCrys AEO MCP

12 / 13

The flow at a glance

Connect once: add SolCrys to your assistant. **Ask any day:** analyze your data and keep your context current. **Review every week:** keep or undo each change.

- 1. **Get ready.** Check your plan and role, open **MCP** and select **Copy URL**.
- 2. **Connect Claude.** Add a custom connector with the URL, select **Connect** and **Authorize**.
- 3. **Connect ChatGPT.** Add a custom MCP server or app with OAuth, then **Authorize**.
- 4. **Ask about your data.** Name the workspace and the period; check where each number comes from.
- 5. **Read your context.** Use a recipe to check your pages against your website and AI answers.
- 6. **Update pages.** See each change before it's written, with its source and reason.
- 7. **Review the changes.** Under **Needs review**, open **Changes**, then keep or undo.

When something needs explanation

What you see	What to check
SolCrys tools don't appear	Turn SolCrys on for this chat (Claude: + → Connectors ; ChatGPT: pick it with @ or +). Still missing? Remove the connector and add it again.
"You must be an editor or admin..."	Viewers can't connect. Ask an organization admin for editor access.
"Consent session expired or not found"	The consent screen was open for more than 10 minutes. Select Connect again in your assistant.
"Token missing required scope"	The connection doesn't have that permission. Editors' connections reach Corporate Context only; for AEO data, an admin connects.
Your assistant reads pages but can't edit them	The live edit permission was unticked, or you're no longer an editor. Revoke the app on MCP and connect again with it ticked.
"This month's MCP usage has been fully used"	Your organization used its monthly calls. An admin can upgrade under Billing, or wait for the reset on the 1st (UTC).
"Rate limit exceeded"	More than 60 calls a minute from one connection. Wait the seconds shown, then retry.
VERSION_CONFLICT	Someone changed the page after your assistant read it. Nothing was written: ask it to read the page again and redo the edit.
IDENTITY_OCCUPIED	A live page with that type and name exists. Ask your assistant to update that page instead.
"...60 live Corporate Context writes in the last hour"	Nothing was written. Wait, or switch to drafts for large batches.
A change you didn't expect	Open Activity , filter by the connection, and revert. Revoke the connection on MCP if needed.

Your assistant works from SolCrys measurements of AI answers and the pages they cite. Check its suggestions against sources you trust before you approve a change: your team stays responsible for what your Corporate Context says.

Connecting your own agent? To connect an in-house agent or harness system to SolCrys MCP tools, reach out to support@solcrys.com.
